MANAGEMENT COMMENT

The German 10-year rate ended August at 2.30%, the same level as at the end of July, having bottomed out at 2.17% on 02 August. Credit spreads against government bonds widened over the month from 110bp to 115bp. The start of August was marked by US employment figures showing a sharper-than-expected slowdown in the economy. This led to a sharp widening in credit spreads, which rose from 110bp to 127bp. The publication of US inflation data underlined the slowing trend, with inflation at +2.9% year-on-year compared with +3% expected. These data should prompt the Fed to act quickly on its key interest rates. Expectations remain tilted towards a September cut in the US, with a cumulative expected fall of 100bp between now and the end of the year, while the ECB is set to continue its pace, with a further 25bp cut also in September. At the end of the month, the credit market returned to an environment of lower volatility and tighter risk premiums. Activity on the primary market picked up strongly for Investment Grade issuers after the end of the earnings publication period, and should accelerate further over the coming weeks. We made no changes to the portfolio structure during the month.
