

Investment objective

The fund MONACTION HIGH DIVIDEND YIELD invests in international equities from developed countries which offer a large dividend.

The fund is hedged against FX risks and the management is discretionary and conviction based with a selection process that starts from a macroeconomic analysis and finishes with the stock choices (Top-Down). The fund is diversified across sectors and geographies.

Risk profile*

Lower risk/potential reward Higher risk/potential reward

Recommended Time Horizon: 5 years

The fund is exposed to general investment risk. Investors may be subject to loss and there is no guarantee of the repayment of principal.

Manager Comments

In February, contrary to what we were accustomed to in the stock markets in 2024, the US indices declined (S&P 500 -1.4%, Nasdaq -4.0%), while investors in the rest of the world were more constructive (Eurostoxx50 +3.3% including Dax +3.8% and FTSEMIB +6.0%, China +1.9%).

Recent global economic and political decisions and economic trends in Europe and the United States are at the root of these variations. The market's reaction to the tariffs of the Trump administration was clear, with a reassessment of Fed rate cuts and a decline in US stocks. Inflationary pressures in the United States remain strong, posing risks for monetary policy. In Europe, the chances of a ceasefire in the Russo-Ukrainian conflict have increased, which has favored a more optimistic view of European growth and supported European and cyclical stocks.

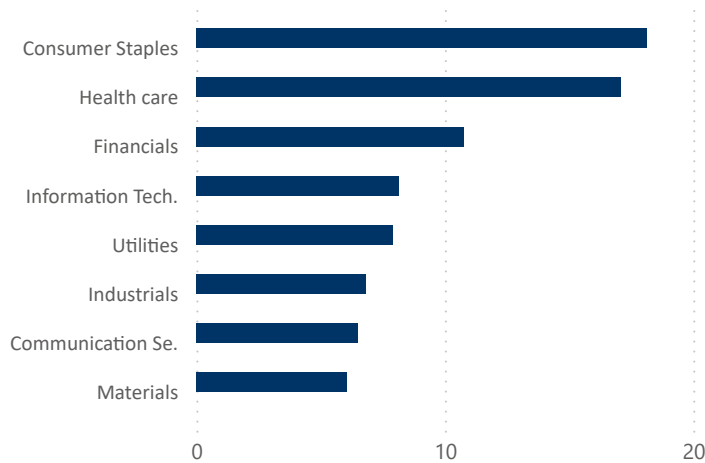

European stocks contributed to the performance over the month, particularly those that had shown a significant performance lag in 2024 (Nestlé, Adecco).

ESG risk: Although the portfolio manager intends to implement the ESG investment process as described in the Mediobanca Group sustainability policy (<https://www.mediobanca.com/en/sustainability/esg-and-the-focus-on-consumers/esg-in-our-group.html>) and on the CMB Monaco website (<https://www.cmb.mc/sites/default/files/2022-05/CMG%20MONACO%20ESG%20POLICY.pdf>), the success of the ESG strategy largely depends on third-party data providers as well as their methodologies and IT systems. These data are not systematically tested or verified by the manager. Consequently, the manager may invest in or divest from a security based on information provided by a third party that may later prove to be inconsistent with the fund's criteria. This could occur when the provider considers additional information that causes the investment to no longer meet the investment criteria. Moreover, multiple providers may be used; however, different providers may present differences, discrepancies, or inconsistencies regarding information related to certain companies. Therefore, in some cases, an internal assessment is conducted to evaluate the company's involvement in a certain activity or controversy. In these cases, the manager does not guarantee that the internal evaluations meet investors' expectations regarding investment or divestment according to the ESG investment process.

* The risk indicator, based on past volatility, cannot cover all types of risks to which the fund may be exposed. It is possible that the past data used does not constitute a reliable indication of the future risk profile. The category associated with this fund is not a guarantee and can evolve with time. The lowest category is not synonymous with a "riskless" investment.

** The rating is expressed as 1 to 5 "globes," whereby a higher number of globes indicates that the portfolio has lower ESG Risk. The number of globes a fund receives is determined relative to other funds in the same Morningstar Global Category.
