Manager Comments

High Yield spreads continued to tighten, falling from 302bp to 289bp in Europe. In the United States, on the other hand, spreads widened by 19bp to 287bp. Interest rates remain highly volatile. The German 10-year rate reached a low of 2.35% before rising to 2.55%, only to fall again and end the month at 2.41%. The same maturity in the United States fell over the month to 4.20% from 4.60%.

Uncertainty remains, particularly following the meeting between Volodymyr Zelensky and Donald Trump, during which the latter stepped up the pressure on the Ukrainian President. Government bond yields were quick to react to expectations of higher defence spending. This new paradigm will have an impact on European governments, which will tap the bond market to finance increased military budgets. The ECB's monetary policy also remains a point of attention, as demonstrated by the reaction of the markets following the announcement of a possible pause in monetary easing by an ECB official.

Against this backdrop, and even though premiums diverged at the end of the month, the credit market is proving resilient, thanks in particular to very strong demand and fundamentals that are deemed satisfactory. The only weakness is that valuations are expensive, with premiums at historically low levels.

Early redemptions have continued in the portfolio since the start of the year. A number of issuers redeemed in February including Contourglobal, Centurion, Summer Bidco, Rekeep and Teva. We initiated a position in Nissan.

ESG risk: Although the portfolio manager intends to implement the ESG investment process as described in the Mediobanca Group sustainability policy (<https://www.mediobanca.com/en/sustainability/esg-and-the-focus-on-consumers/esg-in-our-group.html>) and on the CMB Monaco website (<https://www.cmb.mc/sites/default/files/2022-05/CMG%20MONACO%20ESG%20POLICY.pdf>), the success of the ESG strategy largely depends on third-party data providers as well as their methodologies and IT systems. These data are not systematically tested or verified by the manager. Consequently, the manager may invest in or divest from a security based on information provided by a third party that may later prove to be inconsistent with the fund's criteria. This could occur when the provider considers additional information that causes the investment to no longer meet the investment criteria. Moreover, multiple providers may be used; however, different providers may present differences, discrepancies, or inconsistencies regarding information related to certain companies. Therefore, in some cases, an internal assessment is conducted to evaluate the company's involvement in a certain activity or controversy. In these cases, the manager does not guarantee that the internal evaluations meet investors' expectations regarding investment or divestment according to the ESG investment process.

* The risk indicator, based on past volatility, cannot cover all types of risks to which the fund may be exposed. It is possible that the past data used does not constitute a reliable indication of the future risk profile. The category associated with this fund is not a guarantee and can evolve with time. The lowest category is not synonymous with a "riskless" investment.

** The rating is expressed as 1 to 5 "globes," whereby a higher number of globes indicates that the portfolio has lower ESG Risk. The number of globes a fund receives is determined relative to other funds in the same Morningstar Global Category.
