Manager Comments

The German 2-year sovereign yield fell over the month, ending the month at 2.02%. The ECB deposit rate at 2.75% is still at a level deemed 'restrictive' for the eurozone economy. The economic outlook remains clouded by geopolitical tensions, budgetary concerns in the eurozone and trade frictions fanned by President Trump. As a result, 'increased caution' was deemed necessary regarding future rate cuts 'given the current uncertainties'. The duration of the portfolio is around 9 months. The average rating of the securities in the portfolio is BBB+, with a low proportion of high-yield debt.

ESG risk: Although the portfolio manager intends to implement the ESG investment process as described in the Mediobanca Group sustainability policy (<https://www.mediobanca.com/en/sustainability/esg-and-the-focus-on-consumers/esg-in-our-group.html>) and on the CMB Monaco website (<https://www.cmb.mc/sites/default/files/2022-05/CMG%20MONACO%20ESG%20POLICY.pdf>), the success of the ESG strategy largely depends on third-party data providers as well as their methodologies and IT systems. These data are not systematically tested or verified by the manager. Consequently, the manager may invest in or divest from a security based on information provided by a third party that may later prove to be inconsistent with the fund's criteria. This could occur when the provider considers additional information that causes the investment to no longer meet the investment criteria. Moreover, multiple providers may be used; however, different providers may present differences, discrepancies, or inconsistencies regarding information related to certain companies. Therefore, in some cases, an internal assessment is conducted to evaluate the company's involvement in a certain activity or controversy. In these cases, the manager does not guarantee that the internal evaluations meet investors' expectations regarding investment or divestment according to the ESG investment process.

* The risk indicator, based on past volatility, cannot cover all types of risks to which the fund may be exposed. It is possible that the past data used does not constitute a reliable indication of the future risk profile. The category associated with this fund is not a guarantee and can evolve with time. The lowest category is not synonymous with a "riskless" investment.

** The rating is expressed as 1 to 5 "globes," whereby a higher number of globes indicates that the portfolio has lower ESG Risk. The number of globes a fund receives is determined relative to other funds in the same Morningstar Global Category.
