Manager Comments

The German 2-year sovereign yield rebounded slightly by 9bps over the month to end at +1.776%. Volatility continued to fall, and May was a positive month for risky assets. Corporate credit spreads tightened overall. The extreme risks that emerged in April, linked to the US administration's political programme, have since been factored into valuations. And the season of solid results in the first half of the year has helped to restore investor confidence. Many bonds bought during the volatility spike have returned to their highs. The rating model of the securities in the portfolio has moved up to a soft BBB- or BBB in average following the purchase of High Yield securities in mid-April. Total duration is stable at around 9 months.

ESG risk: Although the portfolio manager intends to implement the ESG investment process as described in the Mediobanca Group sustainability policy (<https://www.mediobanca.com/en/sustainability/esg-and-the-focus-on-consumers/esg-in-our-group.html>) and on the CMB Monaco website (<https://www.cmb.mc/sites/default/files/2022-05/CMG%20MONACO%20ESG%20POLICY.pdf>), the success of the ESG strategy largely depends on third-party data providers as well as their methodologies and IT systems. These data are not systematically tested or verified by the manager. Consequently, the manager may invest in or divest from a security based on information provided by a third party that may later prove to be inconsistent with the fund's criteria. This could occur when the provider considers additional information that causes the investment to no longer meet the investment criteria. Moreover, multiple providers may be used; however, different providers may present differences, discrepancies, or inconsistencies regarding information related to certain companies. Therefore, in some cases, an internal assessment is conducted to evaluate the company's involvement in a certain activity or controversy. In these cases, the manager does not guarantee that the internal evaluations meet investors' expectations regarding investment or divestment according to the ESG investment process.  
\* The risk indicator, based on past volatility, cannot cover all types of risks to which the fund may be exposed. It is possible that the past data used does not constitute a reliable indication of the future risk profile. The category associated with this fund is not a guarantee and can evolve with time. The lowest category is not synonymous with a “riskless” investment.  
\*\* The rating is expressed as 1 to 5 “globes,” whereby a higher number of globes indicates that the portfolio has lower ESG Risk. The number of globes a fund receives is determined relative to other funds in the same Morningstar Global Category.
